

SINTEZ

A GLOBAL DIGITAL ECONOMY (GDE) PLATFORM

SINTEZ is a decentralized blockchain platform for the economy of the future that combines traditional and innovative mechanisms of building economic relations with up-to-date methods of security promotion.

Our mission is the synthesis of maximum convenience, security, quality, efficiency, and performance of the new generation and, as a consequence, of the GDE's new level of development.

SINTEZ is the synthesis of the economy's future!

THE CONTEMPORARY ECONOMY'S PROBLEMS AND THEIR RESOLUTION

- The organization of the contemporary economy has a number of drawbacks, such as centralization, non-transparency, clumsy regulation, all kinds of risks, and the vast expenditures of interaction that fall on the shoulders of users.
- The new blockchain platforms solve these tasks only partially.
- Our solution is a full-fledged platform for handling finances (saving, investing, depositing/crediting, trading), for buying/selling goods/services, and for interaction with the state.
- First of all, we focus on solutions for a stable global currency and for effective investing.

SINTEZ'S ELEMENTS

COINBANK

It is a digital bank that issues COINs, and offers efficient instruments and banking services for their use in different spheres of the digital economy

EXCHANGE

The Exchange is the constituent element where market participants can perform exchange transactions between different digital assets, with the use both of their own funds and of funds received into management from SINT. The Exchange is decentralized and connected with a great number of external trading platforms.

SMART INVESTING (SINT)

Smart Investing is a platform that allows investors to earn the highest profits at minimum risks, and traders to raise the maximum amount of funds into their management.

MARKET

The Market is an element of the platform that allows for buying and selling different goods and services all over the world and with no limitations. There will also exist an auction selling procedure, barter exchange, a guarantor system, a payment gateway for online stores, and possibilities for promotion.

ENTERPRISE

The Enterprise is the many add-ins that allow for integrating the external systems of enterprise management and the government services, controlling the digital asset flows, designing contracts and distributing the employees' rights.

SINTEZ'S USERS

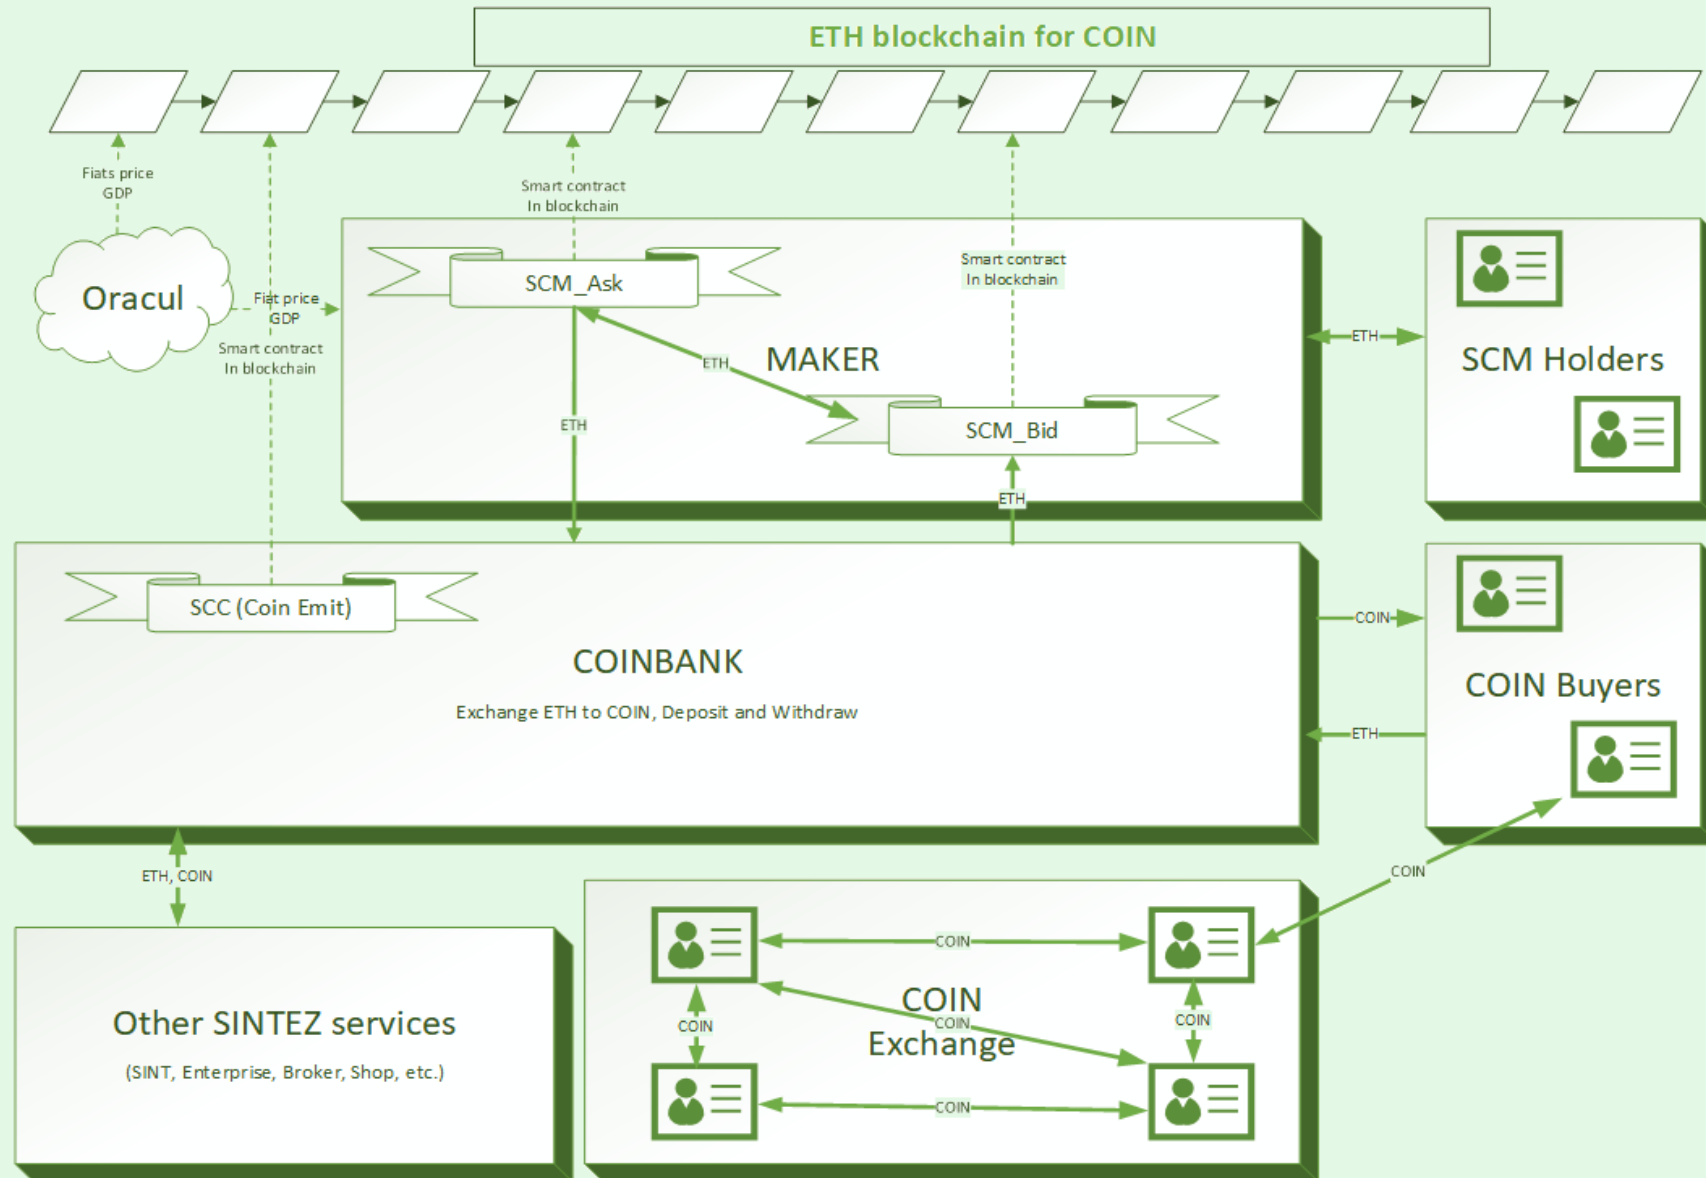

COIN AND THE COIN BANK

- The existing mediums of exchange on blockchain either have a centralized emission (Tether) or are nonliquid (that is, they do not possess the fundamental attribute of money).
- Global money for the global economy is a compelling need. And it has to be blockchain-based money.
- **Coin** is a completely decentralized currency backed by the whole global economy via the “Maker” instrument.
- The key advantage of Coin is the potentially huge liquidity, which will allow it to become full-fledged money.
- Thanks to a number of measures, Coin is maximally safe to use.

GENERAL DIAGRAM OF COIN'S FUNCTIONING

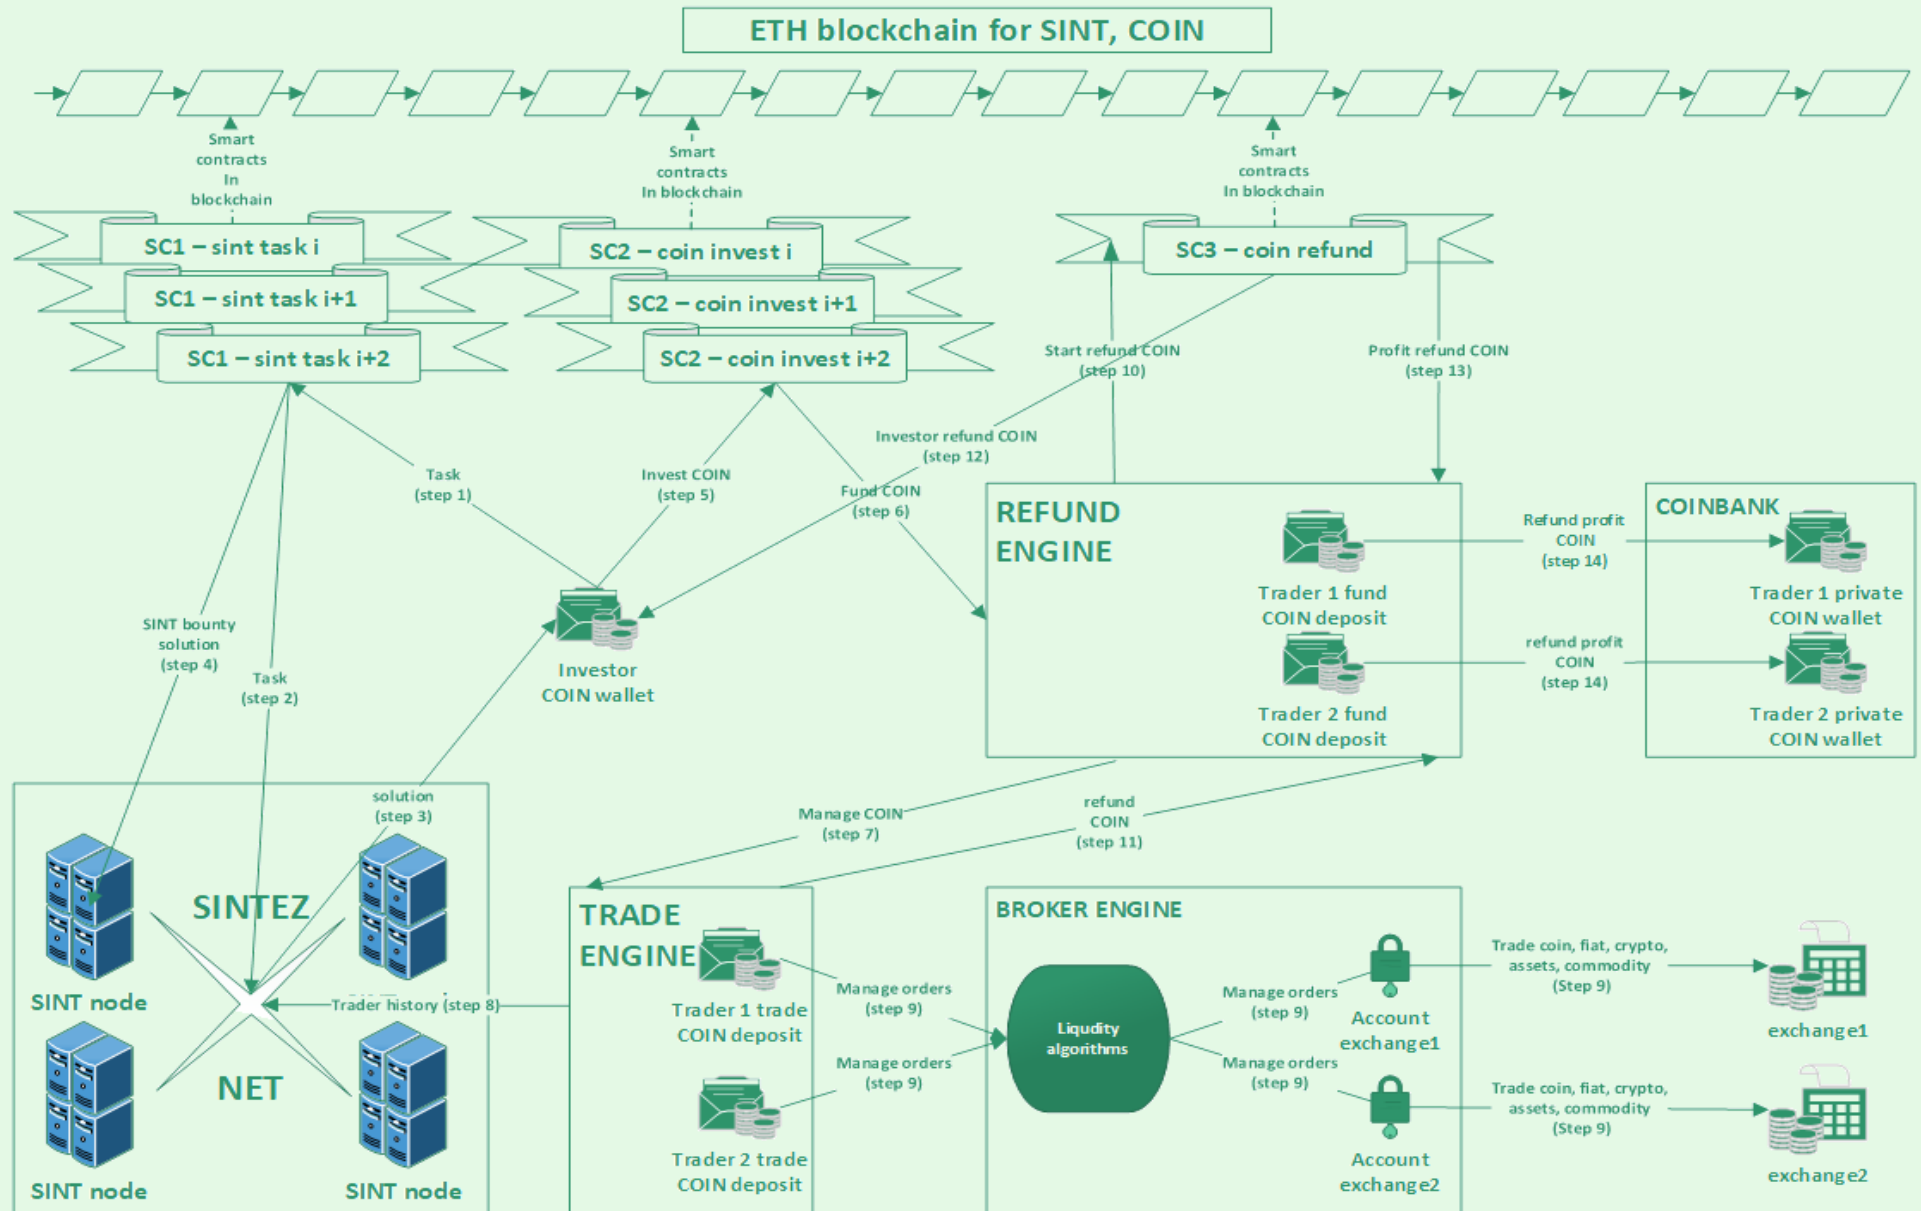

SMART INVESTING (SINT)

- The existing solutions for investing have one common **problem**:
- The investor has to choose a manager themselves. It is all about solving a wide array of complicated tasks, and an average person cannot manage doing that efficiently.
- How to express one's preferences? What managers to choose? How to distribute the money between them and the products offered?
- **SINT** allows for identifying the investor's preferences automatically and distributing the money among the best managers (private traders, MCs, platforms, etc.).
- Our innovative mathematical and technical solutions allow for finding the correct solution quickly and accurately.

THE KEY ADVANTAGES OF SINT:

- **Optimality:** the absence of need for the user to choose the managers themselves simplifies and optimizes investing fundamentally, takes its efficiency to a new level.
- **Operability and client-oriented approach:** the interface of SINT allows any non-professional to satisfy their investment needs in a convenient way.
- **Incentives:** good traders are attracted by the possibility to get maximum funds into management, and investors, to gain access to a maximally wide range of the best products; the market of professional management services is created.
- **Coverage:** it is possible to use cryptocurrencies, common securities, exchange commodities, real estate, and investments in the ICO.
- **Velocity:** mathematical and technical methods have been developed for a quick and optimal search for the required solution.
- **Security:** the conditions of investing are fulfilled automatically by the smart contract, the stable currency minimizes the exchange risks, a number of methods for provision of SINT are used. The solution itself implies diversification in the course of distribution among many managers!

GENERAL DIAGRAM OF SINT'S FUNCTIONING

THE NEXT STAGES OF SINTEZ'S DEVELOPMENT

- Creation of its own decentralized exchange.
- Integration with decentralized markets and creation of its own one.
- Development of solutions for interaction with businesses.
- Development of solutions for working with governmental authorities.
- After creation of the required set of the platform's basic elements, their complete integration will take place, along with synthesis of new opportunities of the economy of the future. There will be additional possibilities for using the platform to build all kinds of economic relations in a convenient way.

SINTEZ'S KEY ADVANTAGES

FULL VALUE

SINTEZ comprises all the fundamental elements of the economy: the bank, investment management, the exchange, the market, and management of organizations and governmental authorities.

SYNERGY

The comprehensive opportunities for improvement of the platform elements' work are implemented by means of their combination.

CONVENIENCE

A client-oriented interface allows for fulfilling all the needs in handling finances and assets in an optimum manner.

QUALITY

Simplicity, velocity, liquidity, productivity, and maximum efficiency.

SECURITY

Decentralization, encryption, anonymity, transparency of operations, and democratic management of the platform and of its development.

SINT TOKENS

- The SINTEZ economy is based on SINT tokens. All the charges of the service (and of third-party participants providing the platform's work) will be paid in them. The accumulated funds will be distributed among SINT holders from time to time. That is, the entire platform is an analogue of a miner with a POS mechanism.
- SINT holders will be able to vote for SINTEZ's parameters of work and its development, to set the charges and, in such a democratic way, to regulate the entire economy in the long run.

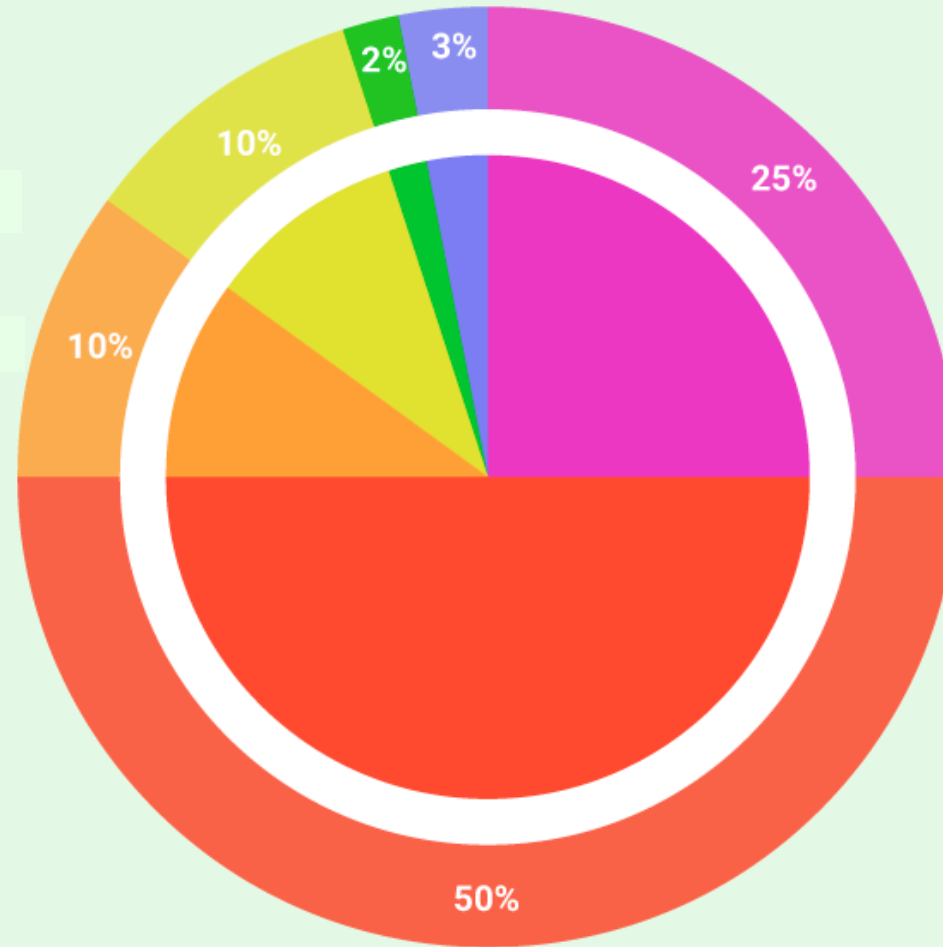

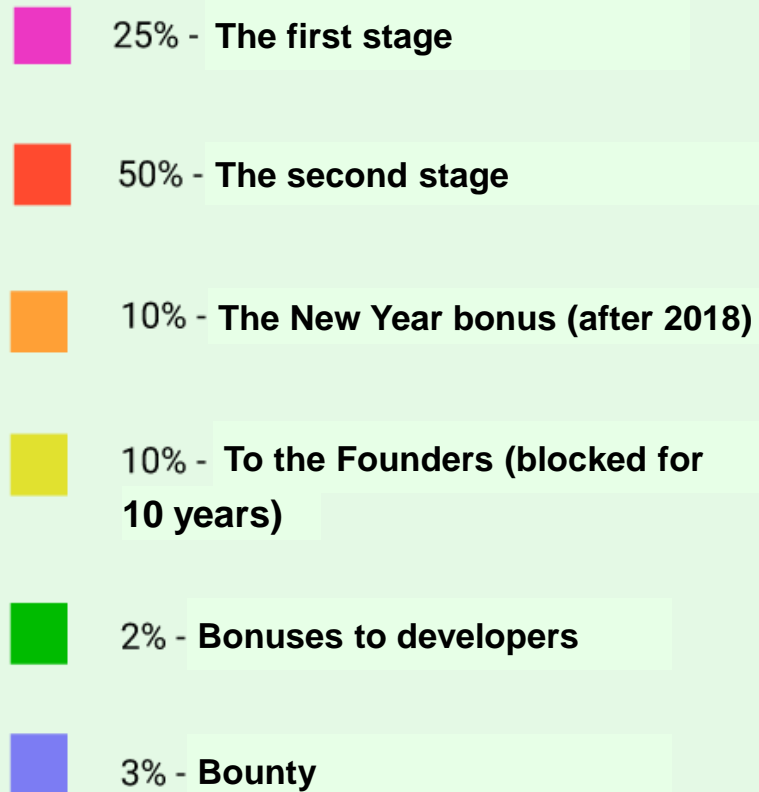

SINT HOLDERS' PROFIT

- **Earning on price increase.** First of all, we try to determine the long-term increase in token price by high-quality implementation of a global investment-attractive project. The increase will be induced by purchase of tokens for paying the platform's charges. The pattern of token emission implies reduction of volatility and risks.
- According to our estimates, the growth will amount to X10 in the short term, and to X5 in the mid-term. Due to the impact of the scale, the platform can grow to the level of globally relevant systems.
- **Earning due to distribution.** 70% of the collected charges will be distributed in accordance with the POS system by the token holder, and 30% by the voter.
- The amount of distributions during the first year of working is estimated at \$0.01-0.1 per 1 SINT. In 10 years, this amount will be equal to about \$100 per 1 SINT per year.
- **New Year gifts.** They can add up to 20% of profit for the first year.
- **Platform management.** Long-term investors will be able to control the increase and security of their investments.

THE STRUCTURE OF ICO

- The total amount of SINT tokens to be emitted is **1,000,000,000** (one billion). These are **ERC-20** compatible tokens based on the Ethereum blockchain.
- The total amount of tokens to be sold for ethereum is 75% (that is, 750 mln):
 - **25%** (250 mln tokens) during the first stage of ICO and Pre-Sale
 - **50%** (500 mln tokens) during the second stage of ICO
- The remaining 25% of tokens will be distributed in the following way:
 - **10%** (100 mln tokens) will be transferred into the specialized wallet for New Year gifts to long-term investors (automatically via the smart contract)
 - **10%** (100 mln tokens) will be kept by the SINTEZ team. The tokens are blocked, and will be released for use in the amount of 10 mln tokens every year. They will be released completely within 10 years.
 - **2%** (20 mln tokens) will be distributed as bonuses to SINTEZ developers.
 - **3%** (30 mln tokens) will be allocated for holding the Bounty.

DIAGRAM OF FUNDS DISTRIBUTION

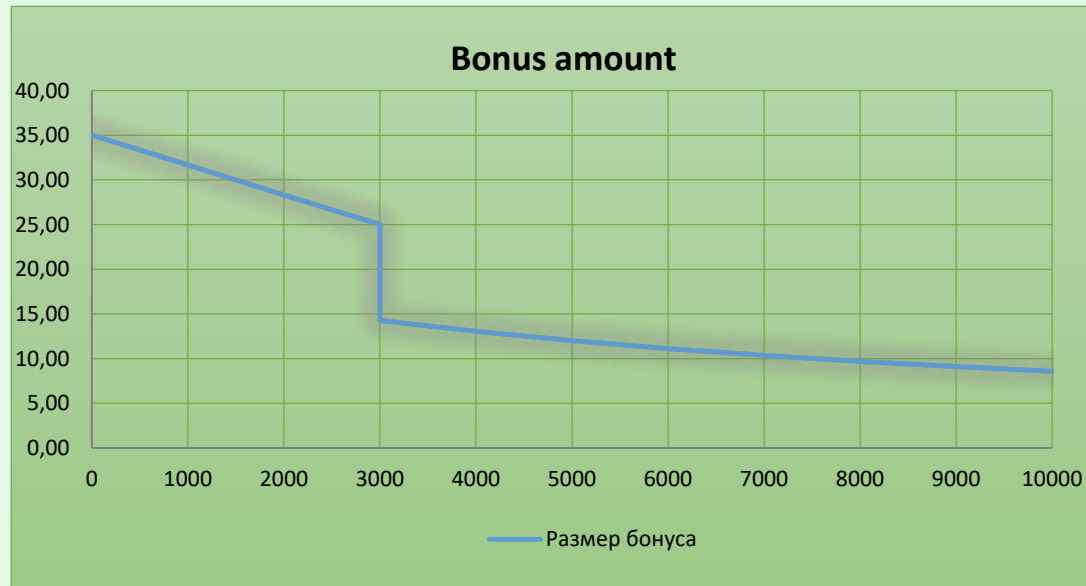

THE FIRST STAGE OF ICO

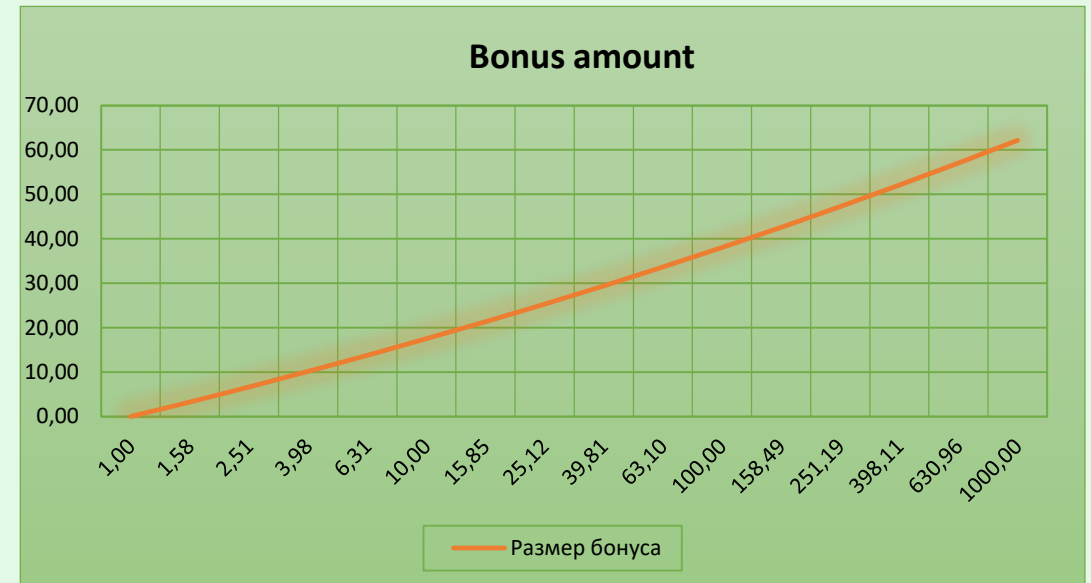

The first 250 mln are to be sold during the **first stage of ICO and Pre-Sale**, starting on November 7. The tokens will be distributed at once after the 1st stage proportionally to the investment amounts with 2 bonuses – for the time and the amount of funds invested.

Bonus to early investors (in %)

(depends on the total amount of funds collected as of the moment of the transaction)

Bonus for the amount of investment (in %)

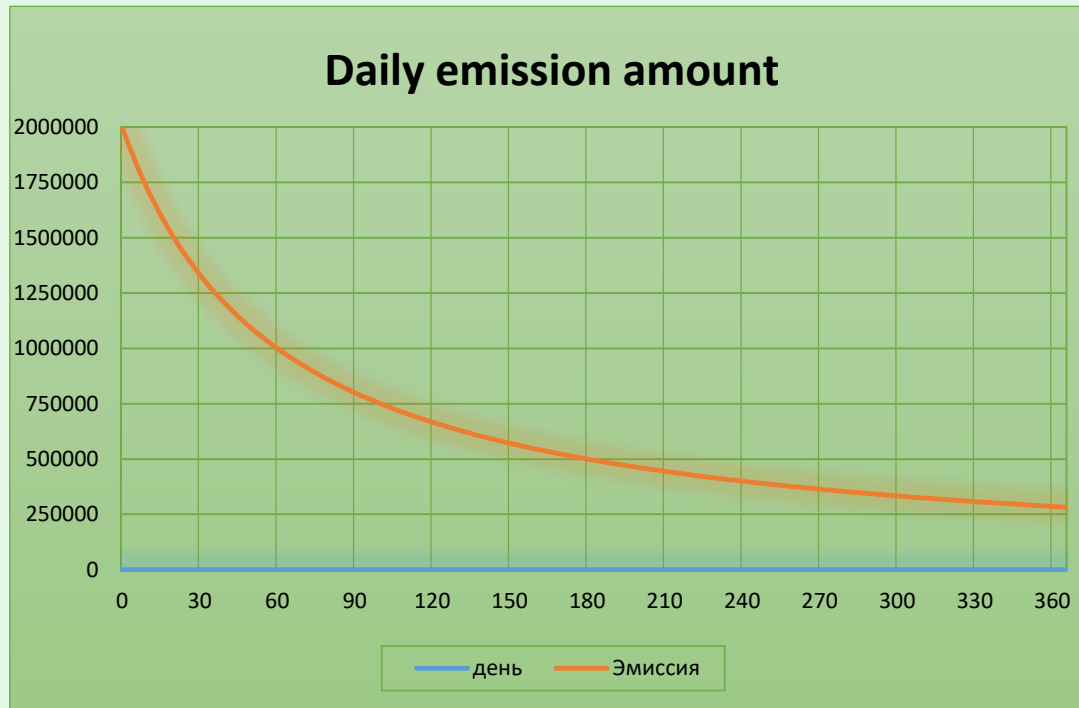

THE SECOND STAGE OF ICO

The second stage will start at once after the 1st one. The basic amount (2 mln tokens) multiplied by 2 coefficients is emitted every day:

1. Decrease of the amount with time

(emission without regard of the 2nd coefficient):

2. Market support:

The second coefficient depends on the current volatility of the SINT tokens. In case of a sharp rise or fall, emission will increase or decrease correspondingly to suppress the oscillations.

USING SINT TOKENS
